The XM radio system provides a wonderful service to trucker, farmers and ranchers and the traveling and general public by providing current weather and traffic information at the turn of a dial. In rural areas such as Montana there are miles of highway where there is NO reliable radio service for such information let alone entertainment and music. There is also limited cell phone service so XM radio fills in that void. It is a subscriber service and we WANT the traffic and weather information available to us. Also as a point of clarity.. few if any radio stations advertise their locations on the radio dial forcing a person to 'search' for them. That is distracting at best. Please Leave the XM service as is and let it continue to provide its subscribers the benefits we paid for. thank you for your time. Janelle Ryen, rancher in Montana
